FOR IT, SECURITY AND COMPLIANCE LEADERS

Who has access to what? At any time. Audit-proof.

idpulse is European identity governance for organisations that need enterprise-grade control. Rolled out fast with an agile approach. **idpulse** makes all access visible, automates the identity lifecycle and gives your auditor evidence that holds up.

What you gain

Fast

Live in a few weeks. Up to 10× faster onboarding than legacy IGA projects.[1]

Scalable

idpulse is highly performant and manages millions of identities and hundreds of millions of entitlements.[2]

User-friendly

A modern, responsive web UI. Fast, intuitive and easy to use. Self-service your employees adopt without training.

European

Built in Europe. EU hosting on request, GDPR-compliant. Your solution provider around the corner: in your language and your time zone.

[1] Compared with typical legacy IGA implementations of 12–18 months. [2] Reference benchmark available on request.

With idpulse, you solve all your IAG problems on one unified platform

1 Manage access centrally

- Effective access across all systems and why it exists
- Automatic provisioning and deprovisioning across all connected target systems
- Time travel: access state at any past date, with two-point comparison (GDPR Art. 15)
- Employees, contractors, service accounts and AI agents as fully governed identities
- Multiple engagements: one person, multiple identities, cleanly separated access

2 Automate the lifecycle

- Joiner–mover–leaver automation with automatic mover detection
- Self-service portal with risk-based approvals and "Compare with a colleague"
- Rules simulated before activation; preventive SoD with time-boxed waivers
- Rotations: time-boxed secondments with automatic revocation
- Automatic access assignment via team and org-unit membership

3 Deliver audit-ready evidence

- Recertification campaigns with automatic revocation on expiry
- Immutable audit trail; SIEM export; encrypted, pseudonymised auditor exports
- Customisable audit reports with parameters, delivered by email on schedule
- Evidence for GDPR, NIS2 and ISO 27001 audits straight from the system

Key capabilities and features (1/2)

Self-service & requests

The My IAM portal for every employee: cart-style requests for multiple people at once, approvals, reviews, your own responsibilities.

- Compare access with a colleague and request missing rights with one click
- Summary of the requested access before submitting
- Risk-based approval routes with automatic escalation
- Holiday delegation, time-boxed and logged

SoD & certification

SoD prevents new violations and finds existing ones. A revocation in recertification takes effect immediately, including in the target system.

- Requests with rule conflicts are rejected before approval starts
- Exceptions only when time-boxed and approved
- Campaigns with automatic revocation on expiry
- Bulk decisions across all filtered items

Joiner–mover–leaver

The lifecycle runs from joining to leaving: automatically in the background or triggered manually.

- Automatic mover detection, including legal-entity moves
- Birthright rules simulated before activation
- Multiple engagements: one person, several identities, each with its own access
- Rehire routing to the actual line manager

Audit & evidence

Every change is traceable. Audit evidence on demand or automatically by email.

- Immutable audit trail; SIEM export
- Time travel with two-point comparison (GDPR Art. 15)
- Scheduled audit reports with email delivery
- Exports pseudonymised and encrypted on request

Key capabilities and features (2/2)

Integration & provisioning

Countless connectors: imports from source systems like HR, provisioning into your target systems. Safeguards stop mistakes before they do damage.

- AD/LDAP with managed groups · SCIM 2.0 · SAP
- Attribute authority: no system silently overwrites another
- Import safeguards: simulation and thresholds against mass errors
- Target-system reconciliation, deviations fixed with one click

Platform & extensibility

API-first: you extend **idpulse** via the API without changing the product. The standard stays upgrade-safe.

- Public API v1 · CLI · typed SDK · AI skills for agents
- Add-on functionality and your own processes plug in via the API, upgrade-safe
- Dynamic attributes, relationships and rules for entities. Extensible at runtime, no restart
- Delegated administration with strict scope boundaries

Team management

Manage teams directly in idpulse or import them from your project organisation.

- Assign access automatically via team membership
- Use teams in approval and certification processes, in addition to delegations
- Teams as owners of resources and access profiles

Notifications

idpulse reliably notifies you of every important event. In-app and by email, multilingual.

- Adapt templates in the built-in editor, with a test send
- Lifecycle notices to the person and their manager
- Escalation reminders for open approvals

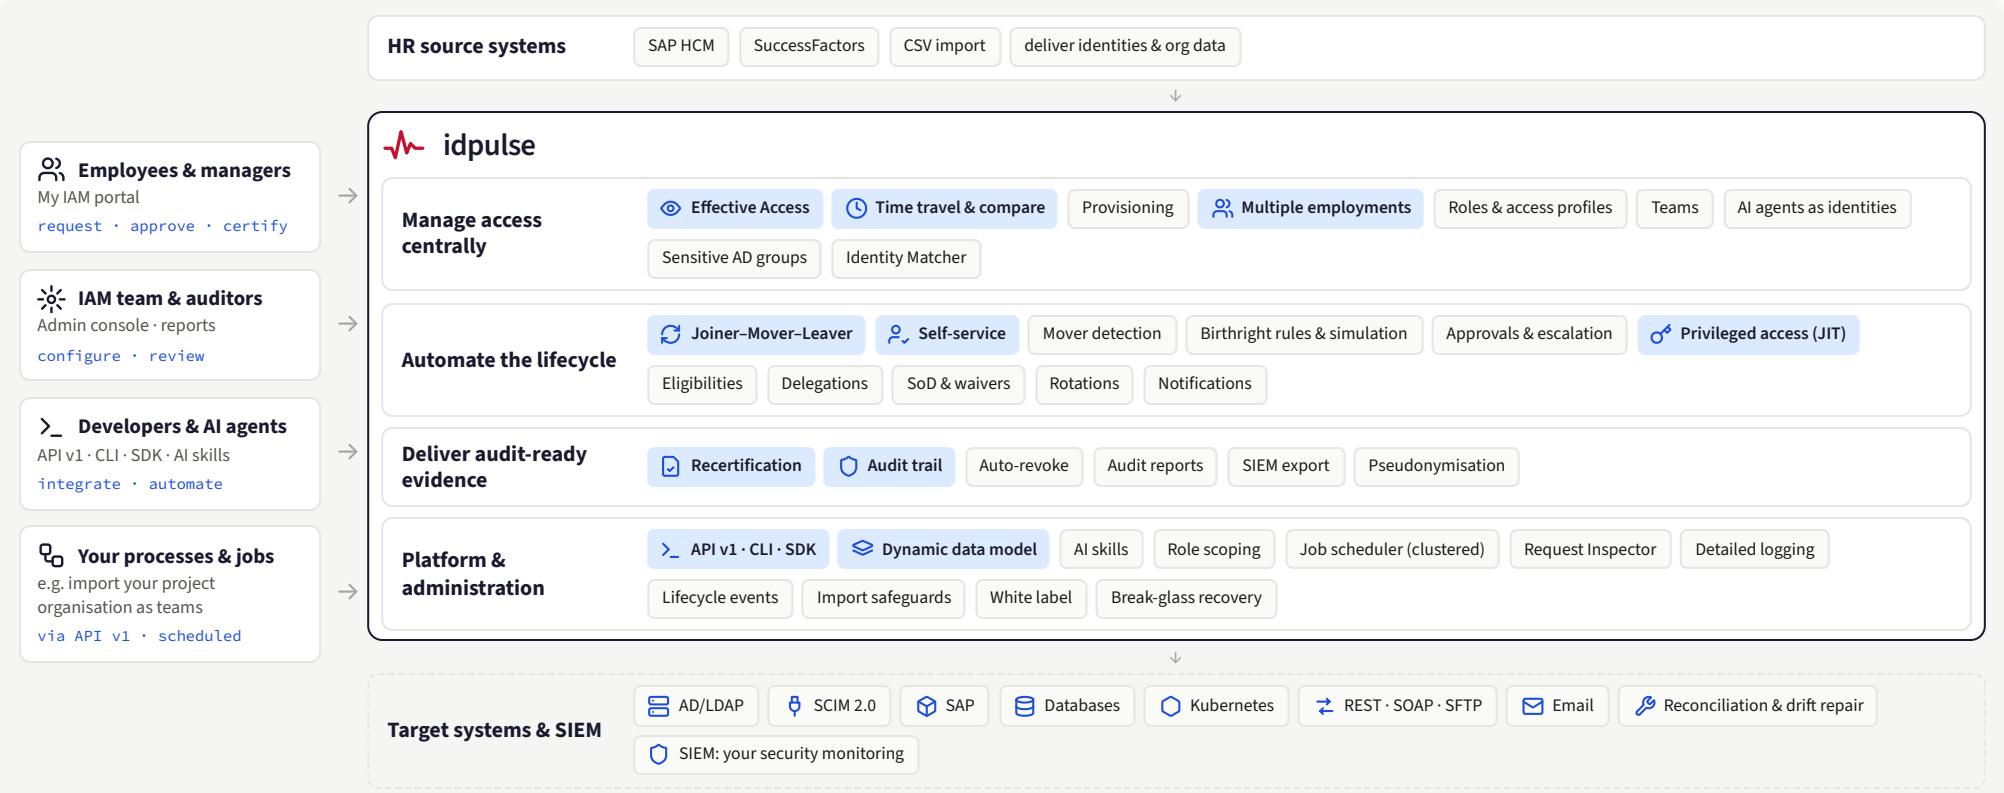
One architecture for your IAG processes

idpulse orchestrates your IAG processes end to end and documents every step in audit-proof form. It runs in your infrastructure or in EU hosting.



idpulse in your system landscape.

How idpulse starts in your organisation

01 · CONNECT

Connect source systems like HR and your target systems. Imports are simulated, with threshold protection.

02 · DEFINE POLICIES

Birthright rules, approval routes and SoD with no code. Testing and approval processes for every rule.

03 · GOVERNANCE RUNS

Joiners, movers, leavers, recertification and evidence run automatically. Your team stays in control.

idpulse at a glance

INTEGRATION

AD/LDAP · SCIM 2.0 · REST · SOAP · JDBC · SFTP · Kubernetes · SAP HCM / SuccessFactors · email fallback · scriptable universal connector

DEPLOYMENT

Dedicated instance per customer · your infrastructure or EU hosting · Docker · PostgreSQL · SSO · white-label ready

COMPLIANCE

GDPR (Art. 15/17/25/30/32) · NIS2 · ISO 27001 · BSI IT-Grundschutz mappings · independently pentested

Why idpulse

10× faster

Faster to roll out: weeks instead of months.[1] Performant and robust even with very large data volumes.[2] Faster to adapt: dynamic data model and API with no release cycle.

We are here for you

We hear you. We deliver solutions and client-specific custom connectors fast. Work with us and help shape new **idpulse** features.

20 years of IAM experience

Built by the team behind IAM at major international banks and the public sector.[3]

About Irian

idpulse is built and implemented by Irian Solutions: vendor and implementation partner in one, with direct access to architecture and roadmap. A European software company with 20+ years of experience, offices in Vienna, Oldenburg, Zurich and Timișoara and more than 60 customers, from financial institutions to the public sector.[3] The team behind **idpulse** built central IAM systems with millions of identities and over 100 million entitlements. More at irian.com.
